TO BE ONE OF THE BEST RURAL ACADEMIC INSTITUTES IN THE WESTERN REGION OF MAHARASHTRA

TO PROVIDE VALUE BASED PHARMACY EDUCATION AND COMMUNITY SERVICES BY MUTUAL RESPECT AMONGST STAKEHOLDERS WITH PERSONAL TOUCH.

M1: PHARMACY EDUCATION.

M2: NURTURE RESEARCH.

M3: INCALCULATE PERSONAL TOUCH AND MUTUAL RESPECT.

FROM CHAIRMAN'S DESK

Hon. Shri. Bhausaheb A. Rupnar
Chairman

I would like to congratulate and welcome our college's budding pharmacists to the world of a rewarding career. I'm delighted to know that FES, Fabtech College of Pharmacy in Sangola, is releasing its Bimonthly Eighteenth Fabtech Pharma Newsletter. Undoubtedly, the college newsletter will contribute in the promotion of the college's multiple activities. It acts as a showcase for the faculty's achievements and successes in the classroom. This strengthens the documentation culture at the institute. It also facilitates the development of teamwork, which is essential in today's competitive global environment. I hope that this tradition of sending out newsletters continues indefinitely. We educate in a unique and creative way, and our students learn in a unique and creative way. Today's pupils have a strong knowledge base and adaptability. I am confident that this will keep the pupils updated about the advancements and challenges they will encounter in the near future. This has been a watershed moment for our programme, and we are grateful for your continued support and efforts on behalf of our students. I wish all the best to the incoming Fabtech College of Pharmacy, Sangola. Pharmacists who are ready to make their mark in the pharmacy profession.

FROM MANAGING DIRECTOR'S DESK

Hon. Dr. Ameet B. Rupnar
Managing Director

I'd like to express my gratitude to Fabtech College of Pharmacy for producing this Eighteenth Fabtech Pharma newsletter. Beyond academics, it has made a name for itself among Pharmacy Colleges in the community by hosting, participating in, and organising seminars, workshops, placement exercises, health awareness campaigns, and blood donation camps, among other things. The efforts of good administration, dedicated teaching faculty, quality students, and a broad foundation of sophisticated instruments, an enlarged library, and an educationally supportive environment are undoubtedly responsible for this accomplishment. It serves as a showcase for the faculty's accomplishments and accomplishments in the classroom. This improves the institute's documentation culture. I warmly welcome you to explore this Fabtech Pharma Newsletter and make a visit to our college campus to get a feel of our vibrant academic atmosphere.

FROM CAMPUS DIRECTOR'S DESK

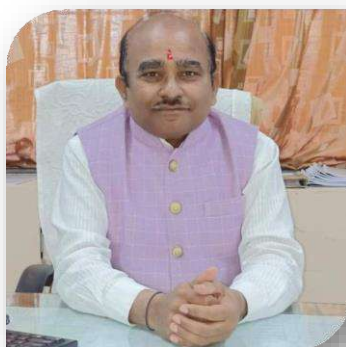

Hon. Dr. Sanjay N. Adate
Campus Director

I'd like to congratulate Fabtech College of Pharmacy, Sangola on this Eighteenth Bimonthly Fabtech Pharma Newsletter work, theory, practical, seminar presentations, and research projects are all part of the Pharmacy curriculum. Aside from academics, students are also involved in cultural and sporting activities, as well as different competitions and social activities. I am delighted to present the Eighteenth Bimonthly Fabtech Pharma Newsletter, and best wishes for the newsletter's continued success.

FROM PRINCIPAL'S DESK

Prof. Dr. S.K. Bais
Principal

The News Letter is a source of great pride and satisfaction for FES, Fabtech College of Pharmacy, Sangola. The College has made significant success in all academic and non-academic areas, as well as capacity building for staff and students. I am confident that this edition of Fabtech Pharma Newsletter will send a positive message to staff, students, and others interested in technical education and technology-based activities. A News Letter is similar to a mirror in that it displays a clear picture of all of a college's activities and helps students and teaching faculty strengthen their writing skills. I appreciate the Editorial Board of this News Letter for their hard work and efforts in completing the work in record time. Also, please accept my deepest congratulations to the staff and students for their successful efforts with Best Wishes.

FROM EDITORS DESK

The editorial team has the honour of releasing the Eighteenth FES Fabtech College of Pharmacy, Sangola. Fabtech Pharma Newsletter. A newsletter, as we all know, reflects a college's vision and objectives. It also highlights upcoming events, activities, and academic progress. We express our heartfelt gratitude to our management and principal for their great support, as well as their permission to publish the newsletter. Many more people, including students, are encouraged to use this newsletter as a platform to exhibit their ideas.

LEADING ARTICLE

Guillain-Barre syndrome (GBS)

Overview

Guillain-Barre (gee-YAH-buh-RAY) syndrome is a condition in which the body's immune system attacks the nerves. It can cause weakness, numbness or paralysis.

Weakness and tingling in the hands and feet are usually the first symptoms. These sensations can quickly spread and may lead to paralysis. In its most serious form, Guillain-Barre syndrome is a medical emergency. Most people with the condition need treatment in a hospital.

Guillain-Barre syndrome is rare, and the exact cause is not known. But two-thirds of people have symptoms of an infection in the six weeks before Guillain-Barre symptoms begin. Infections can include a respiratory or a gastrointestinal infection, including COVID-19. Guillain-Barre also can be caused by the Zika virus.

There's no known cure for Guillain-Barre syndrome. Several treatment options can ease symptoms and help speed recovery. Most people recover completely from Guillain-Barre syndrome, but some serious illnesses can be fatal. While recovery may take up to several years, most people are able to walk again six months after symptoms first began. Some people may have lasting effects, such as weakness, numbness or fatigue.

Symptoms and Causes

What are the symptoms of Guillain-Barré syndrome?

Guillain-Barré syndrome affects your peripheral nerves, which control muscle movement, pain signals, and temperature and touch sensations. Thus, GBS causes issues related to these functions.

The first symptoms of Guillain-Barré syndrome are muscle weakness and/or tingling sensations (paresthesia). These symptoms typically come on suddenly. They usually affect both sides of your body and start in your feet and legs and spread up to your arms and face. Muscle weakness in your legs may make it difficult to walk or climb stairs.

The severity of GBS can range from very mild to severe. Depending on the severity of the condition, other **symptoms may include:** Deep muscular pain in your back and/or legs. Paralysis of your legs, arms and/or facial muscles. In severe cases, you may experience near-total paralysis.

Guillain-Barré syndrome

Symptoms typically come on rapidly over days and can be one or more of the following:

 <p>Rapid muscle weakness.</p>	 <p>Pain in your limbs and spine.</p>
 <p>Paralysis of legs, arms and/or facial muscles.</p>	 <p>Chest muscle weakness and difficulty breathing.</p>
 <p>Difficulty speaking and swallowing.</p>	 <p>Abnormal sensations, like tingling.</p>
 <p>Imbalance and clumsiness.</p>	

If you experience rapid muscle weakness that gets worse over days to weeks, see a healthcare provider right away.

 Cleveland Clinic

Chest muscle weakness, which can make it difficult to breathe. This affects about 1 in 3 people with GBS.
Difficulty speaking and swallowing (dysphagia).

Difficulty moving your eyes and vision issues.

The symptoms of GBS can progress over hours, days or a few weeks. Most people reach the most severe stage of weakness within the first two weeks after symptoms appear. By the third week, about 90% of people are at their weakest.

If you experience sudden muscle weakness that gets worse over hours or days, see a healthcare provider right away. It's important to start treatment for GBS as soon as possible.

What are the complications of Guillain-Barré syndrome?

If GBS affects your autonomic nerves, it can lead to life-threatening complications. Your autonomic nervous system controls the automatic functions of your body that you need to survive, like your heart rate, blood pressure and digestion. When you have issues with this system, it's called dysautonomia.

Complications due to GBS-related dysautonomia can include:

Cardiac arrhythmias.

Unstable blood pressure.

Digestion issues (gastrointestinal stasis).

Bladder control issues, like urinary retention.

What causes Guillain-Barré syndrome?

Guillain-Barré syndrome is a post-infectious, immune-mediated neuropathy.

Post-infectious:

The condition typically develops after you've had some type of infection ("post-" means "after"). In up to 70% of people who've had GBS, their symptoms started within one to six weeks of an illness. Researchers don't know why GBS affects some people after they get sick and not others.

Immune-mediated:

An immune-mediated condition results from an abnormal immune system response. For some people, after they get sick, their immune system responds abnormally and attacks and damages their peripheral nerves, leading to GBS. This is another way of saying it's an autoimmune condition. But unlike most autoimmune conditions, GBS isn't chronic (lifelong).

Neuropathy:

"Neuropathy" is an umbrella term for conditions that damage your nerves. In the case of GBS, it's peripheral nerves. Your immune system attacks your nerves rapidly over days and causes loss of myelin — the "insulation" of your nerves.

Researchers have identified some infections and other immune system-related factors that can trigger Guillain-Barré syndrome, including:

Diarrhea or a respiratory infection:

About 2 in 3 people with GBS had diarrhea or a respiratory infection weeks before developing GBS symptoms. Infection with the bacteria *Campylobacter jejuni*, which causes diarrhea, is one of the most common triggers of GBS.

Viral infections:

Some people with GBS have had the flu or infections with cytomegalovirus, Epstein-Barr virus, Zika virus or other viruses.

Vaccines:

In very rare cases, people have developed GBS in the days or weeks after getting certain vaccines. It's important to know that the benefits of vaccination far outweigh the possible risks. Studies show that you have a greater chance of getting GBS after getting the flu than you do after getting vaccinated against the flu.

Surgery:

Very rarely, GBS can develop after any surgery.

Types

The symptoms of Guillain-Barre syndrome can vary based on the type. Guillain-Barre syndrome has several forms. The main types are:

Acute inflammatory demyelinating polyradiculoneuropathy (AIDP), the most common form in North America and Europe. The most common sign of AIDP is muscle weakness that starts in the lower part of the body and spreads upward.

Miller Fisher syndrome (MFS), in which paralysis starts in the eyes. MFS also is associated with an unsteady walk. MFS is less common in the U.S. but more common in Asia.

Acute motor axonal neuropathy (AMAN) and acute motor-sensory axonal neuropathy (AMSAN) are less common in the U.S. But AMAN and AMSAN are more frequent in China, Japan and Mexico.

Diagnosis and Tests

How is Guillain-Barré syndrome diagnosed?

Healthcare providers typically diagnose Guillain-Barré syndrome based on your symptoms and medical history. They'll ask how and when your symptoms started and if you've been sick recently. They'll also do physical and neurological exams to look for signs of muscle weakness and weak or absent deep-tendon reflexes (hyporeflexia or areflexia).

However, many other neurological conditions share the same symptoms as GBS. So, your provider will likely do other tests to rule out other possible conditions. These tests may include:

Electromyography (EMG) and nerve conduction tests:

These tests evaluate the health and function of your skeletal muscles and the nerves that control them.

Spinal tap (lumbar puncture):

For this procedure, your healthcare provider inserts a needle into your lower back to get a sample of cerebrospinal fluid (CSF). They send the sample to a lab where a pathologist examines the substances in it. In about 80% of GBS cases, there's a normal amount of white blood cells and an elevated CSF protein level. Other abnormalities in CSF may point to other conditions.

Imaging test:

Your provider may recommend an MRI (magnetic resonance imaging) of your spine.

Management and Treatment

How is Guillain-Barré syndrome treated?

If you have Guillain-Barré syndrome, you'll likely need to receive medical care in a hospital's intensive care unit (ICU). This is so your healthcare team can monitor you for any complications of GBS, like difficulty breathing or blood pressure fluctuations.

There's no known cure for Guillain-Barré syndrome. But some therapies can lessen the severity of the condition and shorten your recovery time. The main treatment for GBS includes one of two options:

Plasma exchange (plasmapheresis):

In this treatment, a machine separates the plasma from your blood, treats it, and then returns the plasma and blood to your body. Plasma exchange filters out the antibodies in your plasma that are attacking your nerves.

Intravenous immunoglobulin therapy (IVIG):

This treatment involves intravenous (IV) injections of immunoglobulins, which are proteins that your immune system naturally makes to attack invading organisms. The immunoglobulins come from a collection of thousands of healthy donors. IVIG can lessen your immune system's attack on your nerves.

Both of these treatments usually shorten your recovery time if you start one of them within two weeks of developing GBS symptoms.

Treatment for complications

Complications of GBS can develop if the condition affects your autonomic nerves, causing near-total paralysis. Your healthcare team will carefully monitor your breathing, heart rate and blood pressure. They'll act quickly if any complications develop. Examples of treatments for complications include:

Respiratory care:

If GBS affects the muscles you need for breathing, you may need mechanical ventilation. Respiratory failure affects up to 30% of people with GBS.

Blood clot prevention: Your provider may give you heparin (an anticoagulant) to help prevent deep vein thrombosis. This can happen if you have near-total paralysis and are in a medical bed for an extended period of time.

IV fluids and tube feeding:

If it's difficult to swallow, you may need IV fluids to prevent dehydration and a nasogastric tube to prevent malnutrition. These can also help prevent aspiration pneumonia.

Rehabilitation

As you begin to improve, your healthcare team may transfer you to a rehabilitation setting. Here, you'll work with physical therapists and other therapists to regain strength and resume activities of daily living. Types of therapy include:

Physical therapy:

This helps you improve how your body moves. A physical therapist will help you manage symptoms like pain, stiffness and discomfort. They'll also help you with exercises to regain muscle strength.

Occupational therapy: This type of therapy helps you improve your ability to do daily tasks. An occupational therapist will help you learn how to stand, sit, move or use different tools to participate in your activities safely.

Speech therapy:

If GBS affects the muscles in your mouth or throat, a speech-language pathologist can help you regain skills of swallowing and speaking.

Mobility aids: Devices such as canes, braces, walkers and wheelchairs can improve your mobility and help prevent falls. They can also help reduce fatigue.

Prevention

Can I prevent Guillain-Barré syndrome?

In most cases, Guillain-Barré syndrome isn't preventable. Researchers don't know why some people develop GBS after they get sick and others don't. But one way you can try to lower your risk of GBS is to stay as healthy as possible. These steps can help:

Wash your hands often.

Keep away from those who have the stomach flu or other infections.

Eat healthily and exercise regularly to help boost your immune system.

Clean and disinfect common surfaces such as tables and countertops, toys, door handles, phones and bathroom fixtures.

Stay up-to-date with all vaccines.

Outlook / Prognosis

What is the prognosis for someone with Guillain-Barré syndrome?

The prognosis (outlook) for Guillain-Barré syndrome can vary. Most people with GBS improve considerably over a period of months. But about 30% of adults — and even more children — have some remaining muscle weakness three years after diagnosis.

Does Guillain-Barré go away?

In the majority of cases, the symptoms of Guillain-Barré syndrome improve significantly with time and treatment. Most people start to recover two to three weeks after symptoms first start. The length of total recovery can vary from months to a year or more depending on the severity.

Guillain-Barré syndrome life expectancy

People who recover from Guillain-Barré syndrome have a normal life expectancy. Less than 2% of people die from GBS in the acute phase — when symptoms are at their worst. Common causes of death related to GBS include:

Pneumonia.

Sepsis.

Acute respiratory distress syndrome (ARDS).

Blood clots in your lungs (pulmonary embolism).

Cardiac arrest.

Living With

How do I take care of myself if I have Guillain-Barré syndrome?

The recovery process for Guillain-Barré syndrome can be slow for some. Don't hesitate to lean on loved ones for support — both physically and emotionally. Your healthcare team will also be by your side.

Suddenly and unexpectedly developing weakness or paralysis can be overwhelming. Consider talking to a mental health professional, like a psychologist, if GBS is causing distress. A support group may also help you relate to others who are going through similar experiences and feelings.

A note from Cleveland Clinic

Guillain-Barré syndrome (GBS) is a serious condition that can turn your health on a dime. The good news is that most people with GBS recover well with treatment. But this can take time. And the recovery process can be daunting and exhausting. Know that your healthcare team will be with you every bit of the way. Be sure to lean on loved ones for support, too.

Care at Cleveland Clinic

When your body starts attacking your nerves, you'll want the best care. Cleveland Clinic is here to treat rare neurological conditions like Guillain-Barré syndrome.

Causes

The exact cause of Guillain-Barre syndrome isn't known. It usually appears days or weeks after a respiratory or digestive tract infection. Rarely, recent surgery or vaccination can trigger Guillain-Barre syndrome.

In Guillain-Barre syndrome, your immune system — which usually attacks only invading organisms — begins attacking the nerves. In AIDP, the nerves' protective covering, known as the myelin sheath, is damaged. The damage prevents nerves from transmitting signals to your brain, causing weakness, numbness or paralysis.

Guillain-Barre syndrome may be triggered by: Most commonly, an infection with campylobacter, a type of bacteria often found in undercooked poultry.

Influenza virus.

Cytomegalovirus.

Epstein-Barr virus.

Zika virus.

Hepatitis A, B, C and E.

HIV, the virus that causes AIDS.

Mycoplasma pneumonia.

Surgery.

Trauma.

Hodgkin lymphoma.

Rarely, influenza vaccinations or childhood vaccinations.

COVID-19 virus.

Risk factors

Guillain-Barre syndrome can affect all age groups, but the risk increases as you age. It's also slightly more common in males than females.

Complications

Guillain-Barre syndrome affects your nerves. Because nerves control your movements and body functions, people with Guillain-Barre syndrome may experience:

Trouble breathing

Weakness or paralysis can spread to the muscles that control your breathing. This can potentially be fatal. Up to 22% of people with Guillain-Barre syndrome need temporary help from a machine to breathe within the first week when they're hospitalized for treatment.

Residual numbness or other sensations

Most people with Guillain-Barre syndrome recover completely or have only minor, residual weakness, numbness or tingling.

Heart and blood pressure problems

Blood pressure fluctuations and irregular heart rhythms are common side effects of Guillain-Barre syndrome.

Pain

One-third of people with Guillain-Barre syndrome experience nerve pain, which may be eased with medicine.

Trouble with bowel and bladder function

Sluggish bowel function and urine retention may result from Guillain-Barre syndrome.

Blood clots

People who are not mobile due to Guillain-Barre syndrome are at risk of developing blood clots. Until you're able to walk independently, you may need to take blood thinners and wear support stockings to improve blood flow.

Pressure sores

You may be at risk of developing bedsores, also known as pressure sores, if you're not able to move. Changing your position often may help avoid this problem.

Relapse

A small percentage of people with Guillain-Barre syndrome has a relapse. A relapse can cause muscle weakness even years after symptoms ended.

When early symptoms are worse, the risk of serious long-term complications goes up. Rarely, death may occur from complications such as respiratory distress syndrome and heart attacks.

ACADEMIC ACTIVITIES

Overall syllabus completion and attendance of B. Pharm-I year, Sem-I Students

The Overall 40% Syllabus of Theory and Practical subjects like Human Anatomy and Physiology- I, Pharmaceutical Analysis- I, Pharmaceutics- I, Pharmaceutical Inorganic Chemistry, Communication skills, Remedial Biology/ Remedial Mathematics Theory was completed by the faculty members with 85% attendance of students for the Theory classes and Practical.

Conducted First Sessional Theory and Practical Examination of B. Pharm -I Year, Sem-I

As per Time-Table given by Dr. Babasaheb Ambedkar Technological University, Lonere. The Fabtech College of Pharmacy, Sangola was conducted the First Sessional Theory and Practical examination from 27/01-1/2025 to 08/02/2025.

Approved by PCI (New Delhi), DPE (M.S.)
Ministry of Health & Family Welfare
Maharashtra, Government of Maharashtra
Lonere Dist - Raigad & MSRTF, Mumbai.
MRE CODE: 16927 MSRTF CODE: 1933

NOTICE

All the students, teaching and non-teaching staff members are hereby informed that First Sessional Practical Examination of First Year (Sem- I) B. Pharmacy, for the Academic Year 2024-25 is scheduled to commence from Monday, 27th January, 2025 as per your academic time table. All the students are informed to note the same.
If any changes in the schedule, will be conveyed accordingly.

COLLEGE ACHIEVEMENT

Fabtech College of B. Pharmacy awarded "A" rating by Dr. Babasaheb Ambedkar Technological University

Fabtech College of B. Pharmacy has received an "A" rating from Dr. Babasaheb Ambedkar Technological University for the academic year 2023-24.

As academic experts from the university, Dr. R. P. Marathe (Government College of Pharmacy, Chhatrapati Sambhajinagar) and Dr. K. B. Burade (Government College of Pharmacy, Karad) inspected the college premises, classrooms, laboratories, well-equipped library, computer lab and submitted an academic report.

Hon. Shri. Bhausahab Rupnar Chairman, Fabtech Education Society, Sangola, Hon. Dr. Ameet Rupnar, Managing Director, Fabtech Education Society, Sangola, Hon. Dinesh Rupnar, Executive Director, Fabtech Education Society, Sangola and Dr. Sanjay Adate, Campus Director, Fabtech Technical Campus, Sangola congratulated the College Principal, Prof. Dr. Sanjay Bais, teaching and non-teaching staff and wished them all the best for the future.

EVENTS

“Kranti Jyoti Savitri Bai Phule Jayanti”

The birth anniversary of “Kranti Jyoti Savitribai Phule” was celebrated on 3rd Jan, 2025 in Fabtech Technical Campus, Sangola.

Chairman of the organization, Hon. Shri. Bhausaheb Rupnar, Managing Director, Dr. Shri. Ameet Rupnar, Executive Director of the organization, Shri. Dinesh Rupnar and Campus Director, Dr. Shri. Sanjay Adate paid tributes by placing floral wreaths on Savitribai Phule image.

On this occasion, Prof. Dr. S.K. Bais, Principal, Fabtech College of Pharmacy, Sangola, Prof. Dr. R.B. Shendge, Principal, Fabtech Engineering College and Research Centre, Sangola, Prof. Tanaji Burungale, Principal, Fabtech Engineering College and Research Centre, (Poly) Sangola, all department heads, teachers, non-teaching staff and students of Engineering, Polytechnic and Pharmacy departments were present in large numbers.

This program was coordinated by Prof. Amol V. Pore of Fabtech College of Pharmacy, Sangola

“One Day Faculty Development Program on Sudarshan Kriya”

One Day Faculty Development Program on Sudarshan Kriya organized by Fabtech College of Pharmacy, Sangola took place on 06th January, 2025 in seminar hall. The training aimed to provide a sequence of breathing techniques that range from slow and calming to fast and stimulating. The

practice is simple yet profoundly effective, and it has gained global recognition for its benefits in stress reduction and emotional well-being. The training given by Mr. Milind Patki.

This program was coordinated by Prof. Amol V. Pore of Fabtech College of Pharmacy, Sangola

'Vachan Sankalp Maharashtra' program at Fabtech College of Pharmacy

The 'Book Review' program was planned under the Maharashtra Government's 'Vachan Sankalp Maharashtra' initiative.

Reading culture leads to the all-round development of the personality of the youth and helps in social enlightenment. Books are a great tool for personality development. There is no friend like a book. Reading enriches a person. Books have been given the position of a guru. But in recent times, it has been found that the youth of the country are becoming detached from the reading culture, hence the need to attract the young generation towards actual book reading, so an initiative was planned in the college.

The winners of the 'Book Review' initiative will be honored with certificates.

Hon. Shri. Bhausaheb Rupnar Chairman, Fabtech Education Society, Sangola, Hon. Dr. Ameet Rupnar, Managing Director, Fabtech Education Society, Sangola, Hon. Dinesh Rupnar, Executive Director, Fabtech Education Society, Sangola and Dr. Sanjay Adate, Campus Director, Fabtech Technical Campus, Sangola congratulated Principal and his team for conduction of such programme for faculty and students.

Guidance on GPAT completed at Fabtech College of Pharmacy

GPAT Guidance was organized on 06th February, 2025 at Fabtech College of Pharmacy, Sangola.

For this guidance, Dr. Vijaykumar Chakote (Founder, Pharma star Academy, Nanded) was present as the main guide. He was welcomed by the principal of the college, Dr. Sanjay Bais. On this occasion, Dr. Vijaykumar Chakote guided in detail how to prepare for the GPAT exam and how much importance each subject should have.

He gave information about the tricks to use while studying each subject and how to master that subject. He gave advice on how much honorarium is received after passing the GPAT exam and how long it lasts. He discussed the topic of how much and how much study should be done daily.

Hon. Shri. Bhausaheb Rupnar Chairman, Fabtech Education Society, Sangola, Hon. Dr. Ameet Rupnar, Managing Director, Fabtech Education Society, Sangola, Hon. Dinesh Rupnar, Executive Director, Fabtech Education Society, Sangola and Dr. Sanjay Adate, Campus Director, Fabtech Technical Campus, Sangola congratulated Principal and his team for conduction of such informative programme for faculty and students.
